MDO ONBOARD

MDM (Master Data Management) and Data Quality solutions have been traditionally perceived as expensive both from license and deployment perspectives. Self-serve models for deploying enterprise software are now on the rise to address this concern.

On top of that, Master Data remains as a key challenge across all kinds of organizations. Recognizing the multiple complexities, we offer MDO Onboard to our customers. It allows seamless Master Data solution onboarding and effective usage across the organization, letting you reap the benefits in shorter time with easily justifiable cost.

MDO Onboard

MDO Onboard is a rapid onboarding model for MDO Data Stewards. The Data Stewards in your organization, also known as MDO Administrators can easily be onboarded via one of these two methods:

Guidance Programs	Onboard Assist with our experienced MDO Data Stewards

These options are offered to cater to your team's level of expertise and experience in handling MDO deployment. Most of our solutions can be onboarded in a period of 30 days.

Data Stewards

Data Stewards can come from both business and technology verticals. They are professionals who understand the current landscape of the organization in terms of their domain or technology. They are able to grasp the idea of workflows and business rules around data. Through MDO self-serve experience, these Data Stewards will be equipped to implement governance policies across different data domains.

Key Areas and Availability

Below are the key areas and availability of solutions using MDO Onboard. All of these solutions come with best practices, data models, business rules, workflows, as well as integration to systems like SAP, where applicable.

Currently Available	H1 2022	H2 2022
SAP BUSINESS SYSTEMS AND DOMAINS		

■ MDO MDM & Data Quality for SAP Supply Chain
  □ Includes Spares, Suppliers, Assets
■ MDO MDM for SAP
  □ Materials
  □ Vendors
  □ Customers
	■ MDO DIW for SAP – Data Quality and Remediation for SAP Data
	■ MDO MDM for SAP
	  □ Finance	

OTHER BUSINESS SYSTEMS AND DOMAINS		
	■ MDO DIW for Salesforce – Data Quality & Remediation for Salesforce Data ■ MDO Spares for Oracle and Maximo ■ MDO Spares for IFS	■ MDO Assets for Oracle and Maximo ■ MDO MDM for Oracle
PLATFORM – MDM AND DATA QUALITY		
	■ MDO 360 – Customers, Vendors and Products ■ MDO DIW Platform for data quality	■ MDO multi domain MDM Platform

Approach

It's highly recommended that MDO Onboard starts on a particular domain or an area that is important to the business. Our multi-domain pre-configured solutions with built-in integration help to accelerate the onboarding process. With the awareness that any pre-configured solution will have gaps, our Guidance Programs and Onboard Assist will help to address them, ultimately ensuring that the solution meets your expectations and policies.

Guidance Programs

Our Guidance Programs for Onboarding gives your Data Stewards access to our MDO Training Academy. It contains self-learning, self-paced courses for various solution areas under MDO Onboard. Our Data Stewards are also available during the onboarding process and during the active usage of the tool. DIW, the data quality solution is only offered using the Guidance Programs.

MDO One is the go-to place to access all the Guidance information.

Onboard Assist

Onboard Assist is a fixed fee program where you can tap into our Data Stewards' expertise to perform the necessary onboarding tasks.

Our Data Stewards will work hand in hand with your Data Stewards using tried-and-true, prescribed steps. This paid model has been proven as cost effective. You also have the option to use the traditional Explore to Run Enterprise Deployment Models, run by our service partners.

Once onboarded, your Data Stewards will be proficient to further implement the solution across domains and departments. The fixed fee program allows customizations with defined scope.

The program is conducted remotely, and ASANA and Microsoft Teams are used for collaboration.

Key Phases of the Onboard Program

The below phases are applicable to both Guidance Programs and Onboard Assist. (SAP Business Systems and Domains)

Induction	Preparation	Explore	Deploy	Live
■ Send Login	■ Internal Connectivity	■ Customer Pull Data	■ Gap Config & Unit Test	■ Continuous Improvement & Rollout Additional Domains
■ Product Walk-through	■ Customer Import SAP Packages	■ Customer Uses Standard Scenarios	■ All Scenarios Confirmed & United Tested	
■ Train Administrator	■ SAP Connectivity Test	■ Gap Identification	■ Customer Confirmation	
■ Customer Starts Using MDO		■ Customer Decides to Extend Trial	■ Data Refresh & Production System Data Downloaded	

Success Criteria

■ Strong understanding of the connectivity requirements of your enterprise systems with full preparation.

■ The Gap Identification process is an easy templated approach to help you fully articulate the gaps. You are highly encouraged to spend enough time in this stage and seek consultation with your peers where necessary.

■ The connected Non-Production systems should have enough data to cover most of the scenarios for comprehensive testing.

■ Maintain an overall strategy that incorporates continuous improvement for the data domain implemented along with additional domains.

Key Benefits

■ A great way to start small, applicable to both small and large organizations

■ A better way to prove the importance of MDM to an organization, as opposed to investing time and money on expensive business cases.

■ The Guidance Programs are proven to be helpful in empowering users, as well as letting you save cost from the Onboard Assist's fixed fee.

■ Set a good, working precedent for a larger MDM initiative in the organization.
